

Quick Pack Pump Control Panels

QCI's Quick Pack Pump Control Panel represents our standard design panel that can be designed within four to six weeks after receipt of an order and delivered four to six weeks after approval. The panel enclosure is NEMA 3R rated, measuring 48"H 36"W 12"D. It is a free standing enclosure with 18" skirted legs, 3-point pad-lockable handle, and an aluminum dead-front inner door. These panels can provide control for up to three pumps, in a pump down mode of operation with or without a programmable logic controller.

Our Panels are ready when you need them most and provide you with the perfect solution to your control needs!

We provide startup, full service needs, and long term service contracts upon request.

Control, Instrumentation, Telemetry, SCADA, and Automation Systems

Pump Controls and Automation Systems

**Pump
Controllers**

**MCC & Power
Panels**

**Process Control
& Automation**

**Various Application
Panels**

QCI's control panels are UL508A/698A compliant / serialized and are of a NEMA 3R, NEMA 4X, or NEMA 12 standard construction. Panels can be customized to meet any design standard. QCI can meet any panel requirement desired by our customers and Engineers, and has routinely designed and built double, single, or two sided double door control, process, and power panels. We utilize industry leading products, such as: Siemens, Allen Bradley, Square-D, and Phoenix Contact. Any parts or products can be used, as requested by a spec or a client. We have used all forms of pump controllers, PLCs, SCADA devices, radios, and dialing devices in previous panels and can quickly and efficiently adapt our panel model to fit any form of control, telemetry, or SCADA device or application. With our in house shop and engineering team we can remodel existing panels to update their operation or build a new panel to fit into an existing system.
